

DIRT BUSTER ON THE FRONTLINES

As we continue to monitor COVID-19 developments, the health and well-being of our customers and employees is of utmost importance to us; as such, we wanted to reach out and share how we are increasing our actions to keep Dirt Busters safe for everyone.

Our main goal is to maintain the customer's safety by:

- Using personal protective equipment (gloves, boots and mask)
- Cleaners are not allowed to report to work if he/she has fever, cough, shortness of breath, sore throat, and runny nose.
- Cleaners are required to wash their hands right after the service.
- We make sure that all cleaning materials are disinfected.
- We always have an updates from CDC that will help us maintain the safeness of our field technicians and customers.
- We added cleaning supplies to address the concerns of our customers.

We hope and pray that this pandemic situation will soon be done. If you have additional questions, please contact us – we are here to support.

Stay Clean, Stay Healthy.

Sincerely,

Mike Salas
CEO

DIRT BUSTER ON THE FRONTLINES

To prepare for disinfecting service, you will need to make arrangements for your family and pets to stay away from the house for a few hours. Disinfecting preparation, treatment and aeration can take up to 5-8 hours. Make sure to pack everything you might need for a few hours. The aeration process typically takes about 2 hours. However, you will not be permitted to return until your home has been ATP tested.

What to Do:

- Food for people, animals and pets, as well as tobacco products and medicines (including items in refrigerators and freezers) can remain in your home if they are in plastic, glass or metal bottles, cans or jars with the original manufacturer's air-tight seal intact. If these items are not sealed, they must be removed or bagged in plastic bags.
- Bottled or canned items that have not been opened and still have the original manufacturer's airtight seal do not need to be removed. These items can include drinks, pantry items like soup, and medicines.
- Dry goods packaged in bags and/or cardboard boxes need to be removed or bagged even if they haven't been opened. These items include cereal, chips, rice, etc.
- No need to remove plants but we do recommend removing pet bowls and chew toys.
- Please remove any paperwork, jewelry, and sensitive / breakable items. We will not be responsible for lost items.
- Your cleaning expert may have additional suggestions or requests before the service. Make sure to ask how you can best prepare for the treatment.

Product: Fiberlock IAQ 2500

It's designed specifically as a general non-acid cleaner and disinfectant for use in homes, schools, office buildings, and retail businesses. It is formulated to disinfect hard, nonporous, inanimate environmental surfaces: floors, walls, glazed porcelain, glazed ceramic tile, plastic surfaces, bathrooms and cabinets. A rinse with potable water is required for surfaces in direct contact with food. EFFICACY TESTS HAVE DEMONSTRATED THAT FIBERLOCK IAQ 2500 IS AN EFFECTIVE BACTERICIDE, FUNGICIDE, AND VIRUCIDE, IN THE PRESENCE OF ORGANIC SOIL (5% BLOOD SERUM)

part 2

Cloths:

At this time, recommendations are changing concerning cleaning cloths. Reusable microfiber cloths are now being discouraged. Single use cloths are an effective way to prevent cross contamination.

Method: Electrostatic Disinfect

-Latest high efficiency technology sprayer produces small electrically charged droplets 900 times smaller than your conventional sprayer.

-Droplets reverse direction and move upwards against gravity, reaching the underside, back side, and nooks and crevasses..

-Quickest way to disinfect a room and deliver 100% coverage of all surface areas and eliminate risk of cross contamination.

-Technology advanced droplets that seek out and wrap around germ infected areas and beyond with 75 times the force of gravity.

-Electrostatic droplets will repel and not overlap one another and land on untreated surfaces for 100% surface coverage.

DISCLAIMER: Because COVID-19 is new and novel, at this time no government-registered disinfectant products have been tested against this strain and no product labels have existing kill claims. Some good news is that Coronaviruses such as COVID-19 are enveloped viruses, meaning they are one of the easiest viruses to kill with the appropriate disinfectant product. The US Environmental Protection Agency (EPA) and CDC state that if an antimicrobial product can kill a small, non-enveloped virus it should be able to kill any enveloped virus. The CDC recommends routine cleaning and disinfection procedures (e.g., using cleaners and water to pre-clean surfaces prior to applying an EPA-registered, hospital-grade disinfectant to frequently touched surfaces or objects for appropriate contact times as indicated on the product's label) are appropriate for COVID-19 in healthcare settings.
